

Samiullah

Full-Stack .NET / Angular / React / Next.js Developer

Building APIs, dashboards, database-driven applications, integrations, booking systems, automation tools, and business web applications.

Email: your-email@example.com | GitHub: placeholder | LinkedIn: placeholder | Upwork/Fiverr: placeholder

PROFESSIONAL SUMMARY

Full-stack developer focused on practical business software, backend APIs, database-heavy workflows, admin dashboards, data imports, third-party integrations, and modern web applications. Comfortable improving existing codebases, debugging frontend/backend/SQL issues, and turning business requirements into reliable working systems.

PROJECT HIGHLIGHTS

AR Claims & Charges Management System

Healthcare/admin system for claims, charges, patient balances, denial reasons, claim imports, duplicate handling, soft deletion, SQL validation, and UI/backend synchronization.

RingCentral Call Analytics System

Worker service that syncs RingCentral call log and analytics data into SQL Server with raw API logging, retry handling, derived metrics, and reporting stored procedures.

Slotra Appointment Booking MVP

Multi-app appointment booking platform with JWT authentication, admin/staff/customer roles, service management, staff availability, customer booking flow, and appointment tracking.

API Deployment & Database Migration Practice

Practical .NET API hosting, ngrok exposure, environment configuration, low-cost deployment planning, and SQL Server to PostgreSQL migration research.

WORK STYLE

- Backend strong, database focused, and practical about business workflows.
- Can work on existing messy codebases and debug frontend, backend, API, SQL, deployment, and data handling issues.
- Builds systems that solve business problems, not just screens.

CORE SKILLS

Backend: ASP.NET Core, C#, EF Core, REST APIs, JWT Authentication, Worker Services, Node.js, Express.js

Frontend: Angular, React, Next.js, TypeScript, JavaScript, Bootstrap, Tailwind CSS, HTML, CSS

Database: SQL Server, Stored Procedures, Query Optimization, Data Imports, Duplicate Handling, Reporting Queries

Tools: Git, GitHub, Swagger, Postman, Visual Studio, VS Code, npm, SSMS

Integrations: RingCentral API, External APIs, Webhooks, API Sync Jobs, API Logging, Deployment Configuration

SERVICES

- ASP.NET Core API Development
- Angular Dashboard Development
- React & Next.js Web App Development
- Node.js API Development
- SQL Server Database Design
- API Integration & Automation
- Bug Fixing & Code Debugging
- Admin Panels & Business Systems

BEST FIT FOR

- Freelance clients from Upwork and Fiverr who need business web applications.
- Professional opportunities involving APIs, dashboards, admin systems, booking platforms, healthcare/admin tools, automation, and SQL Server work.
- MVPs and long-term systems that need reliable backend logic and clean frontend interfaces.
